

## NATIONAL TECHNICAL SERVICES PTY LTD

### Environmental Goals

NTS Australia regards care of the environment as an important component of the community we live in. Just as nobody would want to have their own home trashed or ruined by disregard, the environment is the place where we live and we must treasure it. It is we who will breathe the air, drink the water and we who must live in this world and if we disregard it, we do so at our own peril. It will be our children and our grandchildren that will inherit this world, so we should give them the very best world we can.

NTS Australia has a policy of recycling components that have reached end of their useful life. This includes: cardboard boxes, office paper, scrap cable, old steel work, batteries and other types of equipment.

NTS Australia is committed to reducing our energy consumption and to lower our GHG Footprint. Our goal is 3% reduction per annum. From August 2013 we have had a 10% reduction in electricity usage.
